Melt viscocity automatic control program

meltcon

Concept

Resin manufacturing

Iot changeover

Use of ground material

Factors to cause variations in

product quality

dry condition

Change in resin

Molding machine changeover

Replacement of plasticizing parts

Toyo-developped meltcon, automatic resin viscosity control program, automatically controls mlet viscosity via injection molding machines.

The resin melting condition varies depending on environmental fluctuation.

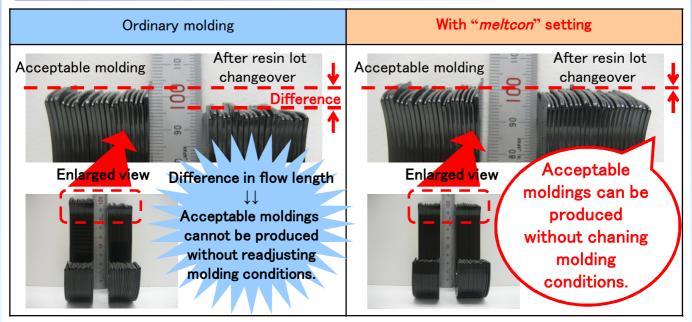

Features

 The cylinder temperature is automatically adjustmed based on the preset reference resin viscosity.

The operator does not need to change molding conditions.

Advantage

Products: Spiral flow Plate

Material: P C

Comparing method:

The bar flow length has been comperared between before and after changeover of the resin manufacturing lot with the molding conditions unchanged.
